## Overview

GE Security Strobe Lights have been designed to command attention. The unique double fresnel lens has been optically engineered to maximize the strobe tube brilliance. This is accomplished with a series of complementing fresnels that cause the dome to "fill" with light each time the strobe flashes. This design feature increases the apparent "on-time", improving viewer perception. Beam distance is increased through the addition of external fresnel lenses.

These Strobe Lights have no moving parts and are therefore not subject to mechanical wear and are virtually immune to shock and vibration. The transistorized power supply and Xenon flash tube flashes a 360° beam of light through a shatter-resistant Lexan® optic lens. Lenses available in six colours: red, amber, blue, green, magenta and clear.
